#### Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

#### Example:

#### Streamlite Procurement - Empathy Map

|                                                                                                                                                           |                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>THINK &amp; FEEL</b><br>Wants faster laptop fulfillment • Worried about missed tasks •<br>Values accuracy and visibility • Wants less manual follow-up |                                                                                                                                 |
| <b>HEAR</b><br>Users asking for laptop status •<br>Hardware team needs clear assignments<br>• Managers expect efficient procurement                       | <b>SEE</b><br>ServiceNow requests and approvals •<br>Manual follow-ups • Delayed configuration tasks • Hardware team task queue |
| <b>SAY &amp; DO</b><br>Submits and monitors requests • Checks approvals • Coordinates with Hardware • Follows up on pending configuration                 |                                                                                                                                 |
| PAIN: missed tasks, delays, manual workload                                                                                                               | GAIN: automation, faster assignment, traceability                                                                               |
