

Define CS, fit into CC

1. CUSTOMER SEGMENT(S)

CS

- **Employees / requesters** who order a Standard Laptop (Lenovo ThinkPad X1 Carbon) from the Service Catalog.
- **Approvers** who review and approve laptop requests (e.g., Eric Schroeder).
- **Hardware team** who configure and hand over the laptops.
- **ServiceNow admins / IT procurement** who build and maintain the fulfilment flow.

6. CUSTOMER CONSTRAINTS

CC

- Only **one process engine** (Flow, Workflow or Execution Plan) can be attached to a catalog item.
- Task must be created only **after approval**; flow runs as **System User** in the **Global** application.
- Needs ServiceNow access to Flow Designer and Maintain Items; old/unnecessary automation must be removed first.
- Budget: each laptop costs about **INR 91,931** plus **INR 8,357** annually.

5. AVAILABLE SOLUTIONS

AS

- **Manual process:** Hardware team is told by email/ticket and creates configuration tasks by hand – simple, but slow and error-prone.
- **Catalog item with no flow attached** (fulfilment automation level "Unspecified") – approval happens, but nothing follows.
- **Legacy Workflow / Execution Plan** engine – works, but is older and harder to maintain.
- **Flow Designer (chosen):** low-code, trigger-based, reusable and easy to track.

2. JOBS-TO-BE-DONE / PROBLEMS

J&P

- **Requester:** order a standard laptop quickly through the catalog and get it approved.
- **Approver:** review the request (REQ) and approve it in one click.
- **Hardware team:** automatically receive a catalog task – "Laptop needs to be configured" – once the request is approved.
- **Admin / IT:** reduce manual intervention and keep the full chain traceable: REQ → RITM → SCTASK.
- **Business:** prevent missed or delayed configuration tasks and improve coordination between procurement and Hardware.

9. PROBLEM ROOT CAUSE

RC

- After approval there is **no automatic link** between the approved request item and the fulfilment work.
- The Standard Laptop catalog item had **no flow** assigned, so the Hardware team depended on manual hand-offs.
- Standard laptop requests are **repeatable**, yet each one needed manual effort – causing delays, missed tasks and poor coordination between procurement and Hardware.

7. BEHAVIOUR

BE

- **Requester:** opens Service Catalog > Hardware > Standard Laptop, picks optional software and clicks **Order Now**.
- A request (REQ0010001) is created and sent to the approver, who approves it from the Approvers tab.
- **Hardware team** picks up task SCTASK0010001, configures the laptop and closes the task.
- **Admin** builds flow "Standard Laptop Task" in Flow Designer (Trigger: Service Catalog; Action: Create Catalog Task) and assigns it to the catalog item under **Process Engine**.

Identify strong TR & EM

3. TRIGGERS

TR

- Employee needs a new standard laptop and submits a catalog request.
- Request gets **approved** – the Service Catalog trigger fires and Flow Designer starts.
- Admins notice manual configuration tasks being missed or delayed.

4. EMOTIONS: BEFORE / AFTER

EM

- **Before:** uncertain, frustrated, chasing follow-ups, unsure whether the laptop is being configured.
- **After:** confident and in control – task created automatically, clear ownership, status visible in ServiceNow.

10. YOUR SOLUTION

SL

- **ServiceNow Flow Designer automation "Standard Laptop Task"**
- **Milestone 1 – Create the flow:** Flow Designer > New > Flow (Application: Global, Run As: System User) > Trigger: **Service Catalog** > Action: **Create Catalog Task** (Request Item = RITM data pill; Short description/Description: "Laptop needs to be configured"; Assignment group: **Hardware**; Approval: **Approved**) > Save > Activate.
- **Milestone 2 – Assign the flow:** Maintain Items > Standard Laptop > Process Engine > add the flow > Update.
- **Result:** Request → Approval → Flow triggered → Catalog Task created → Hardware team configures → Laptop ready for user.
- **Benefits:** less manual work, no missed tasks, better coordination.

8. CHANNELS of BEHAVIOUR

CH

- 8.1 ONLINE**
- Order laptop via Service Catalog (Order Now / Add to Cart).
 - Approver approves the REQ/RITM in ServiceNow.
 - Hardware team works the catalog task in ServiceNow; admin builds in Flow Designer and Maintain Items.
- 8.2 OFFLINE**
- Follow-up with the Hardware team in person or by phone on laptop status.
 - Physical, hands-on laptop configuration and set-up by the Hardware team.
 - Handover of the configured laptop to the employee.
