

Project Design Phase Proposed Solution Template

Date	08 October 2026
Team ID	9100MindMesh
Project Name	Streamlite Procurement
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	In the standard laptop procurement process, an approved request has no automatic link to the fulfilment work. The Hardware team depends on manual hand-offs, so laptop configuration tasks can be missed or delayed and coordination between procurement and the Hardware team suffers.
2.	Idea / Solution description	Automate the process with ServiceNow Flow Designer. 1. Create the flow "Standard Laptop Task" (Application: Global, Run As: System User) with the Service Catalog trigger and the Create Catalog Task action (Request Item via data pill; Short description: "Laptop needs to be configured"; Assignment group: Hardware; Approval: Approved). Save and activate it. 2. Assign the flow to the Standard Laptop catalog item under Process Engine. Result: Request submitted → Approved → Flow triggered → Catalog Task created → Assigned to Hardware team → Laptop configured → Ready for user.
3.	Novelty / Uniqueness	Low-code, trigger-based automation in Flow Designer replaces manual hand-offs. Request, approval and fulfilment are linked end to end (REQ → RITM → SCTASK) without scripting, and the configuration task is created and assigned automatically.
4.	Social Impact / Customer Satisfaction	Employees get their laptops faster, with a clear, traceable request status. The Hardware team gets clear task ownership and less repetitive manual work, and missed or delayed configuration tasks are minimised, improving coordination between teams.

5.	Business Model (Revenue Model)	Internal IT service-management automation, so there is no direct revenue. Value comes from cost savings: less manual effort, fewer delays and rework, and faster employee productivity. The same flow can be packaged as a reusable procurement-automation service for other teams.
6.	Scalability of the Solution	Built on standard ServiceNow Service Catalog and Flow Designer, so the same pattern can be applied to other catalog items (monitors, peripherals, software) by changing the assignment group and field values. More actions such as Send Email, Wait For Condition or Update Record can be added to the flow as needs grow.
